Keeping parents informed about their children's progress in school can help with homework completion, the authors say.

STORY HIGHLIGHTS

Writers: Recent articles said helping children with schoolwork has little value

They say it's a misreading of research because kids getting help often fare poorly anyway

They say numerous studies show grades, attendance improve when parents onboard

Writers: Texting parents on progress, holding meetings with teachers critical to success

Editor's note:** [Todd Rogers](#) is assistant professor of public policy at Harvard Kennedy School. [Lucas Coffman](#) is assistant professor of economics at Ohio State University. [Peter Bergman](#) is assistant professor of economics and education at Teachers College, Columbia University. The opinions expressed in this commentary are solely those of the authors.(CNN) --** Should you be involved with your children's schooling?

Several recent articles have questioned the common belief that parent involvement is critical to improving student performance in school. One recent New York Times op-ed, titled "[Parental Involvement Is Overrated](#)," and an Atlantic piece called "[Don't Help Your Kids With Their Homework](#)," touched off a heated discussion online suggesting that parental involvement is of surprisingly little value to student achievement and, if anything, does more harm than good.

This interpretation of the evidence is misguided. Worse, it sends a dangerous message to families and policymakers: Encouraging parental involvement is unlikely to improve educational outcomes or reduce achievement gaps.

Citing their research, the authors of the Times piece, Keith Robinson and Angel L. Harris, describe provocative findings that show that students of parents who are very involved in their children's

House Speaker John Boehner says the U.S. needs to finish the job right in Afghanistan; history will judge us not on whether we ended wars, but how we ended them

Death penalty is unchristian

Todd Rogers

education perform worse than students of parents who are less involved.

While the authors control for certain variables, their research only implies there is a relationship between parental involvement and student performance. This caveat is important; the existence of a relationship does not tell us what causes what.

Lucas Coffman

Think of it this way: If you had two children, and one was getting A's and the other C's, which of them would you help more? The C student. An outsider, noticing that you've spent the school year helping only one of your children, might infer that parental help caused that child to earn lower grades. This of course would not be the case, and inferring causation here would be a mistake.

Peter Bergman

Fortunately, a rapidly growing body of research -- including our own -- looks at whether low-cost parental engagement interventions can cause changes in student performance. We are researchers in economics and psychology who conduct randomized controlled experiments in educational settings.

Randomized experiments, modeled after medical clinical trials, are the "gold standard" for understanding whether a given behavior causes a change in a specific outcome. Results from these experiments suggest that involving parents is a potent, cost-effective and scalable way to increase student achievement in a number of settings.

Are U.S. students falling behind?

Film details impact of race on education

Enrollment up in no-test, no-tech school

Highlights from this new literature include interventions in low-income areas of Brazil, France, India and the United States. [Sending parents](#) whose high school children attended school in a low-income area of Los Angeles text messages when their kids miss assignments can cause student performance to increase as much as high-performing charter schools cause student performance to increase. In France, [inviting parents](#) to meetings with school staff on how to navigate the transition to middle school and also providing materials on the roles of different school personnel reduces truancy by 25%.

[Paying low-income parents in India](#) to improve their children's literacy can be as effective at increasing child literacy as paying the children directly, especially if the parents are literate and have the time and resources to devote to their children. Providing [literacy classes for mothers in India](#) can meaningfully increase children's test scores. [Asking Boston teachers to call middle school parents](#) in the evening to let them know about their children's academic progress, behavior and upcoming assignments can cut in-class misbehavior by 25% and

improve on-time homework completion by 40%.

[Delivering brief messages to parents](#) on a weekly basis about what their children are doing well and doing poorly can cut summer school dropout rate almost in half. [Sending parents two letters](#) and providing access to a website with information about the usefulness of science, technology, engineering and mathematics, or STEM, classes can increase the number of STEM classes their high school children take by one full semester. [Texting poor parents in Brazil](#) if their child skips school can empower parents to compel the child to attend school.

[Informing parents of public schools' average test scores](#) leads parents to choose higher performing schools for their children. At [H&R Block](#), allowing parents the option to have a federal financial aid form auto-filled for them using their tax return data can increase the likelihood that their child completes two years of college over the next

So many of our society's problems originate with absentee parents or lack of effort by the ones who do stick around.

Parents that get involved and don't expect the school system to raise their kids for them should be applauded.

Alan Dike → Captain Moonlight · 21 hours ago

Totally agree.. now we need to remind people that involvement IS NOT doing their homework for them. Thats a disturbing trend I've seen recently.. kids do great in school, until it comes test time. Ends up, parents are doing the kids work for them instead of leading them through the exercises.

Lee → Alan Dike · 18 hours ago

Good point. The main effort should come from the students. Parents should play a role of encouragement and honest help.

TeeBeeSanford → Alan Dike · 3 hours ago

I agree with you with one caveat. I know the problem I've noticed with my younger two children (didn't see it with the older two) is the amount of homework and the complexity of the assignment. For example, my 4th grade daughter is working on her final assignment for the year. This would be the sixth such project, in which there is a 6 paragraph essay, a poster board with either depictions of artifacts, timelines or a created artifact along with a memorized speech and presentation for the class, including a costume. Subject matter is historical person born before 1950. Other such projects included Native American uses for natural resources. Historical Hispanic figures and their contributions to society. How and what we can do to help with our energy consumption with models of alternative energy etc. Seriously? Come on who out there really thinks a 9 year old can accomplish this alone? This on top of the appx. 2 hrs. of homework she has each night. For 4th grade??? I can tell you, my child is an a-b student and a high achiever but mom now has a working knowledge of how Native Americans lived, can answer any trivial pursuit question about Rita Moreno, have a solid grasp on alternative energy and anything you'd ever want to know about

This mother of five hates these type of assignments, which are clearly designed for extensive parental involvement. At times, it becomes a stupid creativity competition among parents. I already went to school, don't give ME homework!

Interested in everything → TeeBeeSanford · 2 hours ago

Curriculum is outdated. Historical figures that lived before 1950 is less important than future innovations in math and science. I agree - that's way too much of the WRONG work for a child. We need to teach our students things that will help them thrive in the digital world, not be able to recite "in 1492 Columbus sailed the ocean blue" which has literally NEVER come up in my professional life.
