The field of economics offers a pathway to a broad variety of careers in the public, private, and social sectors. Climate change, voting access, and criminal justice reform are just a small sample of the important topics studied by economists that have the potential to influence policy and improve lives. It is crucial for the economics profession to better represent the diversity of people in the United States to ensure that wide-ranging perspectives inform the policies that impact our daily lives.

By targeting support to Black, Latino/a/e, Indigenous, low-income and female-identifying students, the Economics Transformation Project (ETP) seeks to build a more diverse and inclusive field of economics, beginning in high school. ETP’s high school programming provides students with the opportunity to engage with the field in an inclusive and supportive environment, designed specifically with them in mind. Informed by insights and recommendations from economics students and professionals from backgrounds underrepresented in the field, ETP’s high school programming includes introductory workshops as well as more exploratory lectures.

WORKSHOPS

Workshops explore questions that are important to high school students, including but not limited to:

- What is economics?
- How are my passions and the field of economics connected?
- What is it like being an economics student? What topics do you study?
- What career pathways are available in economics?
- If I’m interested in economics, what should I do next?
- What is the history of women and people of color in economics?

Workshops will take place in partnership with high schools and college access programs. Interested in hosting a workshop somewhere near you? Please reach out to Jatnna Amador at jamador@povertyactionlab.org.

ABOUT J-PAL NORTH AMERICA

J-PAL North America is a regional office of the Abdul Latif Jameel Poverty Action Lab (J-PAL), a global research center based at the Massachusetts Institute of Technology (MIT). Anchored by a network of academic researchers, we partner with leaders in the public, nonprofit, and private sectors to rigorously study what strategies meaningfully reduce poverty and translate research into action.
